About Me

As a passionate and results-driven Data Engineer with 3 years of experience, I specialize in designing and implementing robust data solutions using tools like Power BI, Power Query, Google Cloud Platform, and Apache Airflow. My proficiency in SQL and experience with Python allow me to efficiently transform complex datasets into actionable insights, empowering businesses to make data-driven decisions.

Before transitioning to Data Engineering, I spent 2 years as an SAP Consultant, where I gained valuable expertise in ERP systems, process optimization, and integrating technology into business workflows. This unique combination of skills gives me a strong understanding of both data infrastructure and business operations, enabling me to bridge the gap between technical and strategic objectives.

I am fluent in both German and English, which helps me effectively communicate and collaborate in international and multilingual environments.

—
